### **PERFECT FOR**

- Two couples
- Groups of three
- Two travellers wanting separate beds
- Families looking to save money on their transport

# BETA 4 BERTH ROOF TENT SPECS

## Assisted opening

Our rooftop tents feature a patented gas strut-assisted opening mechanism, making set up incredibly fast and easy - less than 30 seconds, and nearly as quick to collapse back down.

## Comfortable Mattress

A comfortable sleep is guaranteed in our rooftop tents with a thick, moisture-resistant 3" high-density foam mattress.

## Getting in and out

Access to the roof tent is easily gained by using the specially designed telescoping aluminum ladder. The design automatically adjusts to the height of the vehicle and prevents bending while you're in the tent.

## Storage

Our rooftop tents include a handy storage pocket for stowing keys, wallets, headlamps, clothing or anything else you need to quickly stash inside the tent. They also feature an additional large ceiling storage net for larger items.

## Wind and rain performance

All of our tents have passed a grueling durability test, and you can sleep in confidence knowing they are waterproof and tested in winds up to 100km/h.

## Rooftop tent fabric

Our roof tents are made by James Baroud and are a top quality, high-performing fabric compared to other roof top tents. They utilize proprietary aluminized polyester with acrylic coating that is 100% waterproof, breathable, UV-resistant, non-perishable, and solar-reflective. All windows are covered with quality insect-proof netting.

## LED lighting

Our roof tents feature a bright 15-LED rechargeable flashlight. Made of tough polycarbonate with an integrated belt clip, the light may be removed from the tent and carried around camp to illuminate your way wherever you go. Includes a charge indicator LED as well as a USB charging cord.

## Ventilation

Our roof tents feature a unique electric ventilation fan powered by a sealed solar panel on top of the tent shell. The ventilation fan is completely waterproof and can run on 24 hours on a single charge. Additional air vents with integrated dust filters on each side of the tent provide air circulation inside while the tent is closed.

## Roof tent dimensions

Bed length: 1.98m  
Bed width: 1.62m  
Inside height: 1.04m  
Total drive height: 2.30m
